STAT

Notes of <u>Significant Developments</u> During
_____ Absence

24 February 1969

STAT 1. _____ called requesting information, prior to Noon this date, regarding the status of financial commitments of other government agencies toward the "Paper Study" to be conducted by Bureau of Standards for GSA.

After some delay, but in time for _____ meeting with Mr.   STAT Coffey, I was able to furnish him with the following information supplied to me by Dr. Alldredge:

Contributions from Federal Agencies have been coming in quite well. They (GSA) has just about received the expected quota for this first fiscal year. Some contributions are:

NSA	$2,500
ARMY	$2,000
NAVY	$2,000
AIR FORCE	$2,000
HUD	$1,000
LABOR	$1,000
V.A.	$1,000
AGRI.	$1,000
INTERIOR	$1,000
COMMERCE	$1,000

Ev. also said that of all the requests GSA sent out only one replied negatively and this was due to an internal Agency regulation that prohibits them (AEC) from contributing.

2.   Received a call from _____ informing us   STAT that certain FBIS materials are ready for shipment to the Johnson Library in Austin, Texas. He indicated that there wasn't any urgency on this, and when I told him you'd be back next Monday he felt it desirable that we wait until then. I also felt you'd like to be in on this first action, therefore we should call him Monday, 3 March

(Materials presently being held in _____ Office. Miss   STAT
STAT   _____ is the contact. I talked to _____ about   STAT this and he didn't know a thing about it. Shouldn't the Records Officer be involved in this?)

25 February 1969

STAT   3. _____ Records Management Officer for the DDI area called
to inform us that serious consideration is being given to the
microfilming of the NIS Gazetteers. _____ has contacted   STAT

STAT   _____ of PSD who informed him that he (Shaw) was going to contact
our office regarding priorities of filming projects and also to
obtain from us an estimate of the volume of records that may be suit-
able for microfilming.

STAT   I informed _____ that we suggest a sample test be made
of this microfilming (by PSD) before they (OBGI) proceed further.
